

Best note taking app in android

Continue

Notes. Taking notes. Referring to them later. Forgetting that you wrote something down already. Dumping things out of your brain to clear up some space.Note-taking apps are almost as bad as to-do apps in the sense that there are way too many options to choose from. Just type in "notes" in the Play Store search box and you'll come across thousands of options to choose from. So we've drummed down the list, and have picked a few that are actually worthy of being called the best note-taking apps for Android.These are the best note-taking apps for AndroidThere's really no other choice when you're looking at the best note-taking apps for Android. Google Keep does everything you could want, and then some, while being completely free and integrating with your Google account.However, Microsoft has made some huge strides when it comes to OneNote. The app is versatile, syncs with the help of your OneDrive account, and is available wherever you go.Notion is the note-taking app on steroids. You can do so much more here than just jot down some notes. From integrating calendars and creating databases, Notion may seem daunting to try, but it's well worth it.Google Keep has been around since 2013, and it continues to be one of the most useful apps you can download. There's an app for just about every platform, and if not, you can just use the web client. From jotting down your grocery list to making a to-do list or saving articles to read later on, Google Keep is the ultimate note-taking app.It's difficult to put into words just how useful Google Keep can be, as many folks haven't even heard of this Google app. Having everything you need in a single location — from note-taking to creating a task list or saving links — can really help your mental wellbeing. Keep is not just one of the best note-taking apps, but it's one of the best Android apps that we have ever seen.And of course, you'll have the easy integration with other Google services, so you can export notes from Keep into something like Google Docs. And if you want to use it as a to-do app, you can do that too and will have the ability to set timed or location reminders so you never forget what's on your docket for any given day. Oh, and the best part? It's completely free.2. Microsoft OneNoteSource: Andrew Myrick / Android Central (Image credit: Source: Andrew Myrick / Android Central)It's clear that Microsoft has recognized it has something great on its hands with OneNote. The company continues to push regular updates to the app, improving the functionality and adding features on a regular basis. It's a bit less conventional compared to other note-taking apps. It uses the "block notes" method, which means wherever you place your cursor, you can just start typing, and then can move those around within the note that you're using.OneNote allows for the creation of different notebooks, which can really help with organization, which can be a pain. It even lets you go a few layers deep if you need to. The app is also available on Android, iOS, macOS, and Windows, so you'll always have your notes by your side.And those who use something like an iPad or one of the best Chromebooks will love the ability to actually write notes. Handwritten notes may seem like a thing of the past, but you can also import PDFs and mark them up, or just open up a new page and start writing. Plus, it uses Microsoft's OneDrive for storage, providing automatic backups whenever you take a new note.3. NotionSource: Andrew Myrick / Android Central (Image credit: Source: Andrew Myrick / Android Central)Where does one begin when it comes to talking about Notion? It's so much more than a standard note-taking app. Search for Notion on YouTube, and you'll find tons of videos describing how creators and professionals are using it to run businesses. You can just use Notion as a basic note-taking app on the best Android phones, but the truth is that it's far more powerful than that.Even those who are more well-versed in Notion than myself haven't reached the limits of what Notion can do. There are some templates that can be used to create different workspaces, you can add calendars and widgets, create dashboards for an overview of your notes or tasks, and so much more.Recently, the company opened up its beta program for Notion API, allowing you to connect it with different tools like Google Calendar or Zapier for automation. As it stands now, the API integrations are in their early days, but this could be an enormous game changer in the future.Even more great note-taking apps for AndroidThere are so many note-taking apps on the Play Store that it's impossible to keep this list so short. So we've rounded up some more familiar faces and a couple of newcomers as viable options if our top three picks don't work quite right for your needs.EvernoteSource: Andrew Myrick / Android Central (Image credit: Source: Andrew Myrick / Android Central)Before we had all of these other note-taking apps, Evernote stood at the top of the mountain for years and years. Over time, the company continued to make questionable design changes, and even included by a price hike for its subscriptions, forcing many users to look elsewhere to store their notes.Evernote is still hanging around, and it's still a great choice for those wanting a digital notebook in their hands. Whether you're trying to plan things out, draw some sketches, or use it to store pictures, videos, or even audio, Evernote fits the bill as one of the best note-taking apps. Evernote is free to download, but you'll likely want to check out the premium plans that offer a bit more functionality.Bundled NotesIf you take most of the great things about Google Keep, throw a different UI on top, and add Markdown support, then you'll end up with Bundled Notes. This is a relative newcomer to the note-taking parade, but it's definitely one that is worth taking a look at. It offers a streamlined interface, with different "bundles" of notes to use and take advantage of.As someone who has learned to rather enjoy writing in Markdown in my time at Android Central, finding a notes app that also uses Markdown has been a taxing adventure. After stumbling across Bundled Notes, I've been using it much more. The only real potential limitations are that it's not available everywhere just yet, and the web app is only available in beta for premium subscribers.SquidIf you want one of the best Chromebook apps that's also great on Android, look no further than Squid. This continues to be an app that gets quickly installed when setting up a touchscreen Chromebook due to its usefulness and versatility. The app is perfectly optimized for stylus input, and makes you feel like you're actually writing on paper instead of writing on a slab of glass.Part of this is thanks to how it keeps track of the pressure being used when actually writing. This provides a smooth writing experience across the board. Plus, you can switch between different "paper" sizes, or opt for an endless canvas if you want one enormous scratchpad.SimplenoteSource: Andrew Myrick / Android Central (Image credit: Source: Andrew Myrick / Android Central)Simplenote is one of those more simplistic apps (appropriately), but its true power is in how it doesn't try to do too much. The app is available on all of your favorite platforms, and you can organize the notes with the help of folders or tags. It's completely free to download, and that includes the ability to keep your notes backed up over the cloud and share notes without paying anything extra.Like Bundled Notes, Simplenote is great for those who prefer to write in Markdown, but you can take notes like "normal" if that's your pace. Perhaps the best thing about Simplenote is derived from its name, as it provides a distraction-free workspace which is rather handy for those who need to sit down and get some writing done.Standard NotesSource: Andrew Myrick / Android Central (Image credit: Source: Andrew Myrick / Android Central)If you're looking for an app that offers end-to-end encryption, then Standard Notes fits the bill. The app offers a free version and is available to download on many platforms, along with Android. There's automatic sync without any data limits, and Standard Notes even offers offline access.If you want to add a few extra features, Standard Notes does offer a premium subscription, starting at less than \$2.50 per month. With Standard Notes Extended, you'll be able to encrypt attachments shared from Dropbox or Google Drive, along with providing access to different themes and extensions. Plus, you'll be able to take advantage of Dropbox, OneDrive, or Google Drive for your backups. All the while, keeping everything encrypted and private. Never forget another big idea again with the best note-taking apps, whether you're going back to school or to the office or studio. While writing notes on paper is all well and good, making digital notes can speed up your workflow, make it easier to connect ideas with colleagues or just ensure you never looks a note again.There are literally hundreds of top note-taking apps on the market — no matter if you're a student off to college or a designer wanting to send ideas to clients. A lot of these excellent note-taking apps are free, or at least provide a free trial, but most busy creatives have nowhere near enough time to try them all out. This is why I've done the research for you, road-testing everything. In this article, I've rounded-up the very best note-taking apps available for a range of devices and platforms. If you need a new device to use these apps on, then take a look at our guide to the best tablets with a stylus for drawing and note taking. And if you are heading back to school, then maybe a new laptop bag or laptop backpack is on your list, too. Read on to find out which is the best fit for you.The best note-taking apps available today(Image credit: Evernote)A pioneer in the field, founded in 2000, Evernote (opens in new tab) remains the cream of the best note-taking apps today. Working across all major platforms, this is the app we'd recommend for anyone looking to get started. Why? Because it's got a good, capable free version, you can access your notes practically anywhere (laptop, desktop computer, tablet, or phone), and the app's packed with useful features. We particularly like using the Web Clipper browser extension to save web pages; the ability to set reminders, and the integration with Siri for taking voice notes. You can search your notes not only by text, but also by tags, the date they were created, the type of media they contain, the location where you created them, and even more.There are two paid-for versions: Evernote Premium (opens in new tab) for individuals, and Evernote Teams (opens in new tab) for, well, it speaks for itself. The former includes sync across unlimited devices (you only get two in the free plan), a 200MB maximum note size, 10GB monthly upload limit, access to notes offline and the ability to annotate PDFs. The Teams plan, aimed at businesses, offers even larger uploads and some great team collaboration tools. Admittedly, neither of these comes cheap, but if you want the Rolls Royce of note-taking apps, this is it (Image credit: Evernote)Apple products are about beautiful, intuitive simplicity, and Bear (opens in new tab) fits that philosophy perfectly. As the best note-taking app for Macs and the iPad, it lets you create notes and sync them across all your Apple devices via iCloud. There's no fussing about with folders and notebooks; you just create notes and then store them. You can attach tags, images and other files, as well as drawings created on your iPad or iPhone. There are apps for macOS, iPhone, iPad, and Apple Watch, plus a browser extension.There's a free version of Bear if you just want to take notes on your iPad, but you'll need to pay for the Pro subscription (opens in new tab) to sync them across devices. That also gives you extra export options, plus the ability to encrypt your notes, password-protect them, and unlock them using Face or Touch ID. Just be aware that even the Pro version is a purposely stripped down app. For example, there's no formatting panel, just support for Markdown. If you want more features, look to Evernote or OneNote, but if you want a simple, minimalist app for iOS that gets the job done, there's no better option.(Image credit: Time Base Technology)If you've invested in the iPad Pro, we expect you're using it for more than checking Facebook and watching cat videos. If you're looking to take advantage of its powerful functionality to be more productive, make sure you're using it to jot down creative ideas in the moment. To do that, we'd like to point you in the direction of GoodNotes (opens in new tab), our next pick from the best note-taking apps. This iOS app turns your iPad into digital paper, allowing you to make searchable handwritten notes quickly and easily wherever you find yourself. You can use the Apple Pencil (or one of the best Apple Pencil alternatives), or just your finger. It's the most similar experience to writing on paper that we've found. And we're not talking about a few scrawled words here; this clever app can recognise everything from equations to mind maps, and it does a great job of converting handwriting into text.Everything gets auto-synced to the iCloud, and you can access your notes from your iPad, iPhone and Mac (there's also a macOS version). GoodNotes also allows you to mark up PDFs manually. Available at a relatively cheap, one-off price, GoodNotes is the perfect app for iPad Pro users who want to make notes when inspiration strikes.(Image credit: Prasad Shirvankar)Note-taking apps shouldn't be complicated, but it's surprising how often you can open one and not know where to start. The Android app Material Notes (opens in new tab) doesn't have that problem. Its opening screen proclaims simply, 'Click the + button to add notes', and it couldn't be easier to use.The user-friendly approach continues through the whole interface, allowing you to create notes, to-do lists and reminders without effort. You can colour-code them, organise them into categories, archive them, assign favourites, and more. There are also some handy unique features, such as the ability to create quick notes from notifications, back up your notes to Google Drive, print directly from the app, and tell your device to read notes out loud.The app is free to download, while a Pro version — available for a cheap one-off payment — adds extra features including a calendar view, backend encryption, extra fonts, and reminder notifications. There's no sync functionality, but for many, that's a feature rather than a gripe, since not everyone wants sensitive information floating about on the web. If you just want to keep your notes on a single device, this is the best note-taking app available for Android. If you do want to sync notes across devices, however, we'd point you to Evernote at number one on our list.(Image credit: Microsoft)If you do most of your work in Microsoft's ecosystem, a notetaking app optimised for Windows makes a lot of sense, even if it's also cross-platform. The feature-rich Microsoft OneNote (opens in new tab) works across Windows, Mac, iOS and Android. You can attach images, symbols, Excel tables, audio files and more to notes, and you can extract text from images. You can also clip web pages through a browser extension, and you can add diagrams and sketches drawn on a Surface tablet. More uniquely, this note-taking app offers an Accessibility Checker, which highlights problems like low contrast, which can make text difficult to read, or images that are missing alt text. There are some great sharing and collaboration features too, such as allowing others to add comments to your notes.Best of all, the free version of Microsoft OneNote includes the vast majority of its features. The only slight catch is that you get just 5GB of storage. If you want more, you'll need to take out a Microsoft 365 Business subscription (opens in new tab).(Image credit: Google)Google Keep (opens in new tab) is the best way to link up all of your Google docs and apps, in fact the only Google app it doesn't connect with is YouTube. When installed a little light bulb appears in the corner of your apps, and clicking this links up your notes with your Google docs, emails and more — and vice versa. You can essentially make notes and then email your notes to friends, or connect your Google doc work to your Google Keep notes. It really connects everything you're doing, meaning notes aren't simple short reminders but can be directly connected to broader and deeper work.This makes Google Keep a little odd, as it's not strictly an amazing note-taking app, but its usefulness and the way it brings together all of your Google apps is actually incredibly handy.(Image credit: Nebo)If you want to take lots of handwritten notes with a stylus, MyScript Nebo (opens in new tab) is best note-taking app for that overall. It's optimised for modern digital pens like Apple Pencil and the Samsung S Pen, and it has some very cool features indeed. You can write with both fingers and a stylus, use a digital eraser where supported, and change the colour of your notes. There's support for 66 languages, and maths and equations are recognised by the app's clever AI. With its proprietary Interactive Ink technology, MyScript Nebo also does a very neat job of translating handwriting into digital text. It's also highly versatile, allowing you to combine handwriting and text in the same paragraph, sentence or even in a single word. You can add custom words, such as technical terms or slang, to help with recognition, and you can see a preview of your handwriting conversion in real time. The only downside is that it only works on high-end devices: but there a guide to compatible devices (opens in new tab).(Image credit: Apple)Apple Notes is, as you'd expect, best used with an iPad or iPhone. Though it can be used in Windows without the deeper connectivity to the Apple Pencil you may miss some of the ease-of-use this note-taking app offers. There's a wealth of powerful note-taking tools at your finger- and Apple Pencil tip, and includes adding attachments such as photos and documents, alongside creating checklists, tables and even sketching alongside your notes to bring your ideas to life. Apple's love of security also means notes can be stored and sent with assurity.Apple is keen to make use of iCloud and the connectivity of its devices, so collaboration is a strength of Apple Notes: Activity view for example enables you to easily see any amendments to your notes and files made by others.Where Apple Notes falls down slightly is in its print options, as it can be hard to print multiple files and docs in one go. I found the need to send files to print separately which takes a while. But then digital note-taking isn't always about creating physical docs. If you have an Apple Pencil, iCloud account and friends and colleagues all hooked into Apple's ecosystem, then Apple Notes is a decent - free - option.Today's best device dealsRead more:
